## RoHS Statement

Magnet sales and Service Ltd have audited their Permanent Magnet products and assemblies against the RoHS directives which commence in July 06.

The four main raw materials of Permanent magnets Alcomax 3, Sintered Ferrite, Sintered Samarium Cobalt and Sintered Neodymium Iron Boron do not contain substances listed in the directive.

Zinc and colour passivation of Mild Steel parts can contain Hexavalent Chromium (HC) a listed substance in the directive. This coating has been used on certain Sintered Ferrite holding Pot assemblies. Stocks of this part are being run down and replaced with Zinc and clear passivate which is HC free. The quality and cost of this product has been unaffected by this change.

We will continually monitor our products and design out any future parts that may contain banned substances to ensure we fully comply with RoHS.

A D Lobb  
Managing Director
